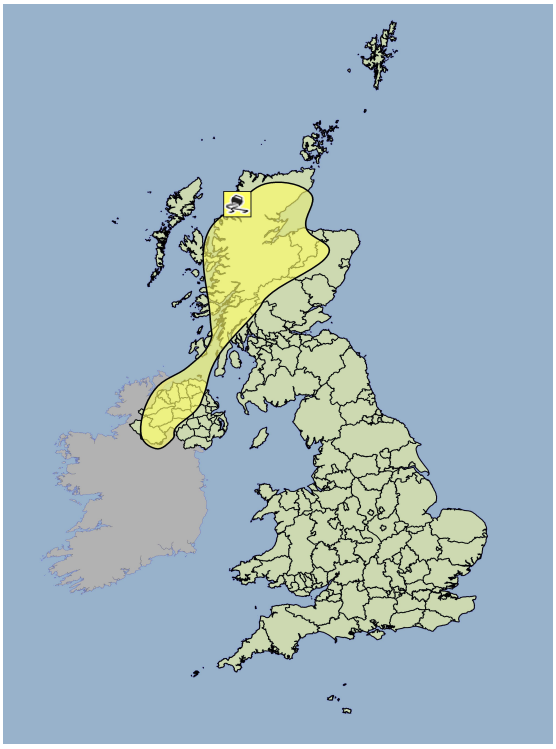
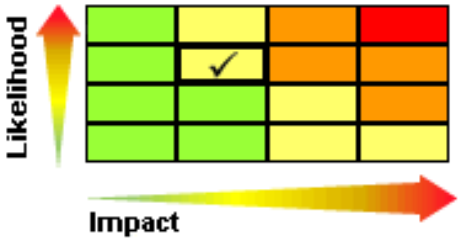
National Severe Weather Warning Service





Chief Forecasters Assessment
A band of rain associated with a cold front will clear southeastwards followed by clearing skies. This will allow temperatures to fall close to freezing in places, giving a risk of ice on untreated surfaces.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **05:00 on Fri, 05th Dec 2014** until **10:00 on Fri, 05th Dec 2014**

Following overnight rain, temperatures will fall close to freezing in places this morning across the northwest half of Scotland and Northern Ireland. The public should be aware that icy stretches may then develop on untreated surfaces, more particularly on higher routes.

This is an update to the warning issued yesterday morning, restricting the main risk area to the northwestern halves of both Scotland and Northern Ireland.
